MILEAGE REPORTING OPTIONS (MRO)

Plug-In Device With GPS

The GPS-enabled plug-in device tracks the number of miles driven and the per-mile rates based on the state the vehicle is traveling in. Location and personal privacy are protected, with no detailed routing information shared with The Eastern Transportation Coalition (Coalition), Georgia Department of Transportation (GDOT), or other third parties. To start using, just plug the device into your vehicle's On-Board Diagnostics II (OBD-II) port, verify installation, and drive.

Plug-In Device Without GPS

The basic plug-in device does not include location capability to provide additional privacy. All miles are assumed to have been driven in the participant's state of residence. To start using, just plug the device into your vehicle's OBD-II port, verify installation, and drive.

In-Vehicle Telematics Without GPS

Most newer vehicles are manufactured with technologies that can be used to conveniently report mileage data. Enable telematics on your vehicle (which may involve additional cost) and authorize Transurban to receive automated odometer readings by following the step-by-step instructions provided after enrollment.

How to Enroll

1. Gather the following information:
 - Name and address matching the vehicle registration
 - License plate number
2. Go to GeorgiaMBUFpilot.org and click Enroll Now.
3. Provide the following information:
 - Name and contact information
 - Address matching the vehicle registration
 - Vehicle information
 - Other demographic information, as applicable
4. Select your mileage reporting option (MRO).
5. If you selected a plug-in device option, installation instructions will be provided in the package with your device. If you selected telematics, your account will be activated within 24 hours.
